CAPABILITY BRIEFING

ValorBuddy™

A voice-first AI orchestration layer for Veteran services

FAR Part 10 Market Research Engagement

VA Office of Information and Technology — Vendor Management Office

November 17, 2026 · Presented by Tagus Technologies LLC

Proprietary information of Tagus Technologies LLC, provided for VA market research purposes only. This briefing is not a proposal or offer.

PURPOSE OF THIS ENGAGEMENT

What we hope to accomplish today

OUR OBJECTIVES

Inform

Introduce ValorBuddy's capabilities as they exist in production today.

Disclose

Share our security, accessibility, and compliance posture candidly, including gaps.

Learn

Understand VA requirements, priorities, and the right paths for future engagement.

AGENDA

1. Company at a glance
2. The Veteran need we address
3. ValorBuddy capabilities and architecture
4. **ValorBuddy in Action: Live System & Departments**
5. Responsible AI and Veteran safety
6. Security and compliance posture
7. Federal readiness roadmap
8. Potential alignment and questions for VA

COMPANY AT A GLANCE

Tagus Technologies LLC — registration data

Legal entity	Tagus Technologies LLC — Wylie, Texas
Ownership	Veteran-owned and Veteran-led; SBA VetCert certification planned (2027)
UEI	**CLBEA2FNJ456**
CAGE code	**95U91**
SAM.gov	Registered — purpose of registration: All Awards
Primary NAICS	518210 — Data Processing, Hosting and Related Services

COMPANY AT A GLANCE

Offering and core competencies

Offering	**ValorBuddy™** — commercial SaaS, in production
Trademark	USPTO Serial No. 50105197 (application pending)
Delivery	Agile (Scrum) with continuous integration
Certifications	AWS Certified Solutions Architect on staff
Early use	42+ registered users (39 Veterans) in first month, zero paid acquisition

Core competencies

- Conversational and voice AI for Veteran-facing services
- Multi-agent orchestration with safety verification
- Document intelligence (DD-214, military resumes)
- Secure cloud architecture and field-level data protection

THE VETERAN NEED

Veterans navigate transition across disconnected systems

01

Benefits and claims

Plain-language guidance is hard to find, and the application process is difficult to navigate.

02

Housing, credit, vehicles

Veteran-friendly options exist but are scattered across disparate sites and non-integrated programs.

03

Career and transition

Civilian job tools rarely translate military specialty codes (MOS, AFSC, Rating) and leadership experience well.

04

Community & belonging

Local veteran events, VSOs, and peer support networks are fractured and difficult to discover centrally.

*Roughly 200,000 service members transition to civilian life each year. — **Source: U.S. Government Accountability Office, GAO-24-107083 (2023).***

CAPABILITIES

One voice-first platform built around the Veteran's life

Voice-first assistant

Plain-language guidance on benefits, transition, housing, career, and family, by voice or text.

Branch-personalized

Interface, emblems, and tone adapt to Army, Navy, Marine Corps, Air Force, Coast Guard, and Space Force.

Local and actionable

Discovery of VA facilities, events, and community resources grounded in real location data.

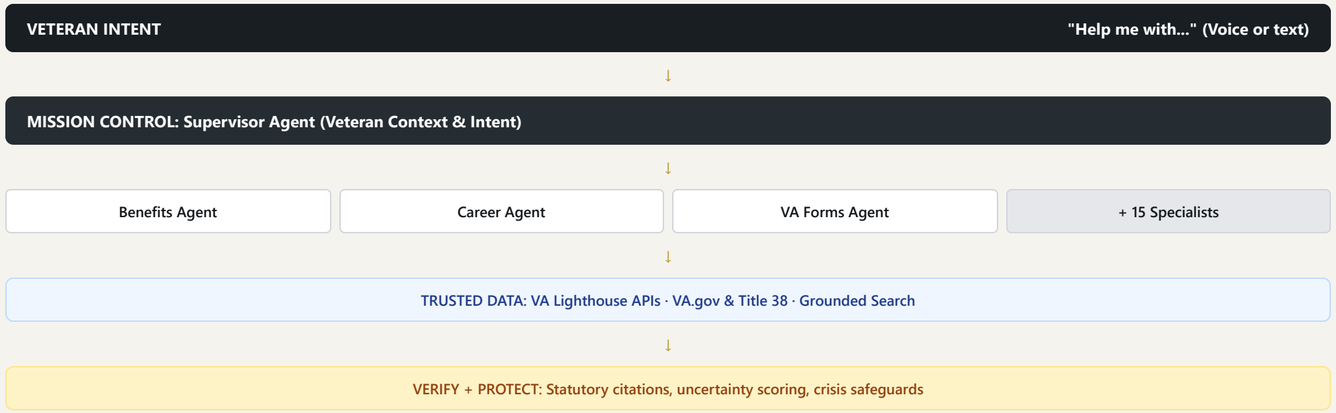

Document intelligence

Veterans upload a DD-214 or resume; specialist agents translate it into immediate next steps.

Status: Web platform in production; Android app (Capacitor, native voice) in active build; iOS planned.

ARCHITECTURE

An orchestration layer over trusted systems

Complements VA systems

The Veteran states a goal; ValorBuddy routes it directly to the trusted source that owns the authoritative answer.

Transparent by design

Each routing step and agent action is displayed to the Veteran in real time.

Model-agnostic

The underlying LLM is replaceable. The mission routing and safety architecture is proprietary to Tagus.

TECHNOLOGY FOUNDATION

An engineered platform, not a chatbot on an LLM

Languages	Python · JavaScript · SQL · HTML5 / CSS3
Backend	Python FastAPI · Uvicorn · Pydantic · SQLAlchemy · REST APIs
Experience	React 18 · Vite · Capacitor Android with native speech recognition and TTS
AI & Agents	Gemini (configurable model) · Supervisor/Planner/Router · 18 specialist agents
Voice Engine	Vapi Voice AI · Native hardware speech recognition · Low-latency audio streaming
Trusted Data	VA Lighthouse Facilities API · VA.gov / Title 38 U.S. Code · Google Search Grounding
Security	Argon2id · JWT · TOTP MFA · RBAC · Field-level encryption · 365-day audit logging

TRUSTWORTHY BY DESIGN

Accurate answers, in a Veteran's language, with context

IN PRODUCTION

Hallucination control

- Answers grounded strictly in authoritative VA sources and live search, with citations shown
- Verification layer checks every response before delivery
- When uncertain, says so directly and routes to the right VA accredited channel

IN PRODUCTION

Military language

- Understands MOS, rating, and AFSC codes, military acronyms, and branch slang
- Translates military combat and technical experience into civilian competencies
- Responds in respectful, disciplined tone

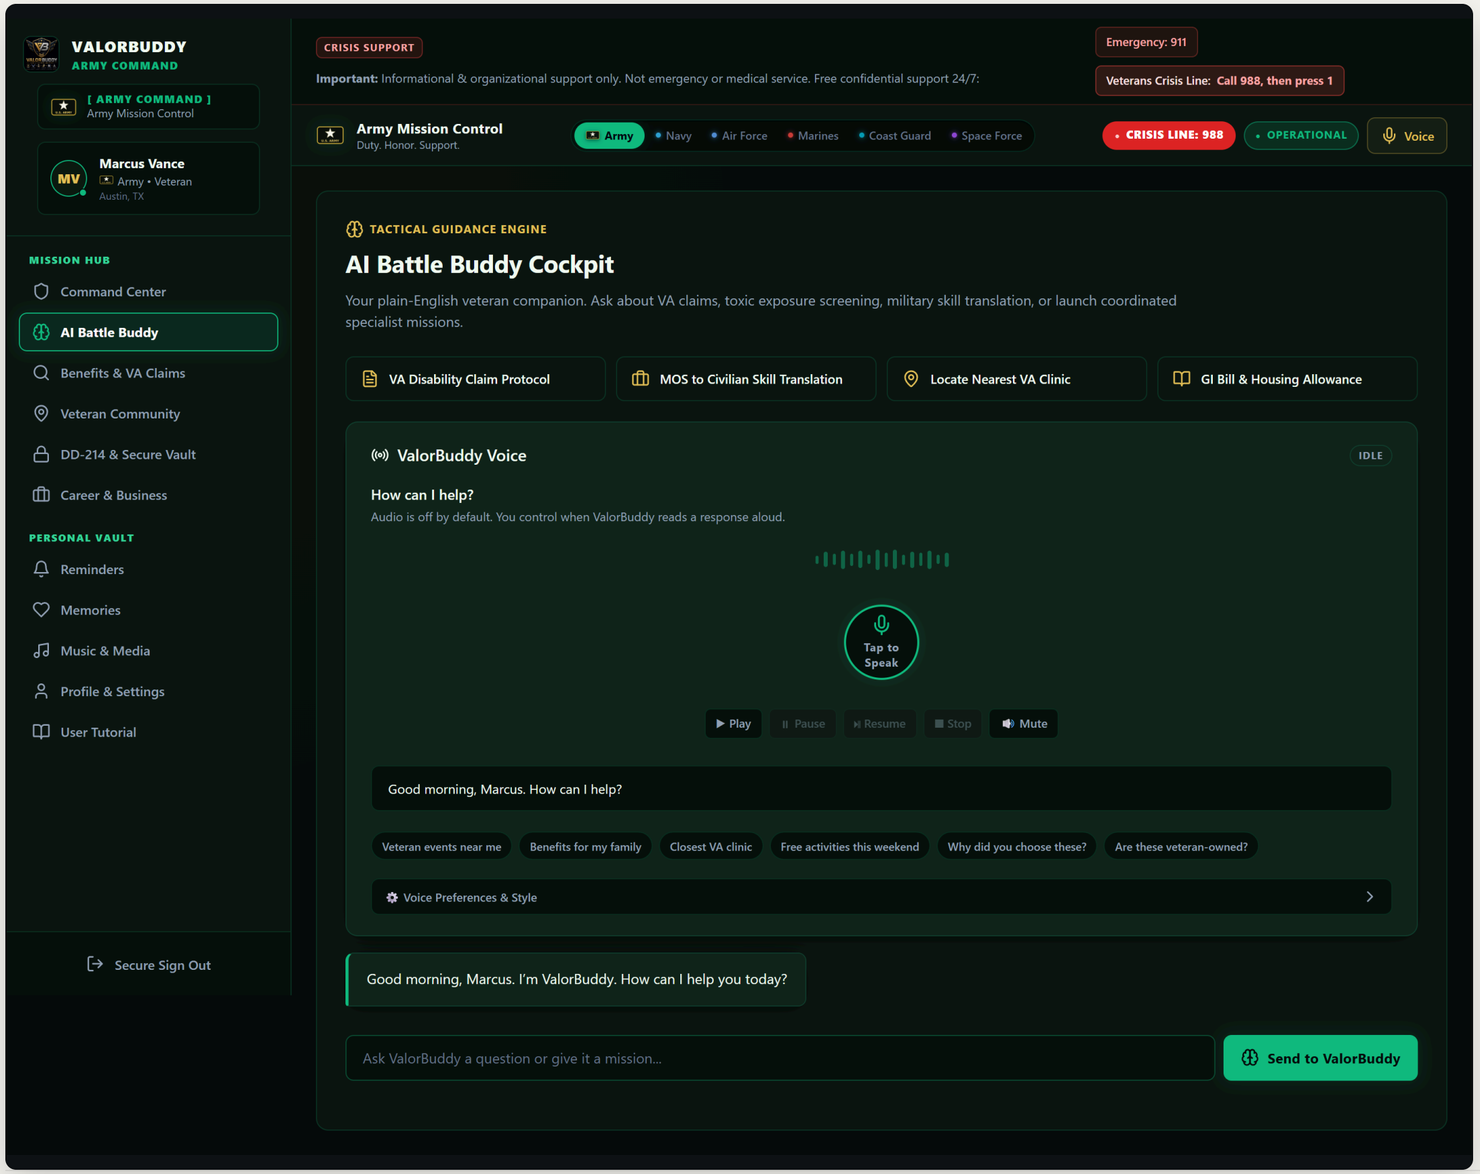

IN PRODUCTION

Context memory

- Remembers branch, deployment history, goals, and open tasks across sessions
- Veterans can view and delete what is remembered at any time
- Memory is private and never shared with commercial third parties

VALORBUDDY IN ACTION — LIVE ORCHESTRATION

AI Battle Buddy: Voice-first conversational cockpit

1. CONVERSATIONAL VOICE ENGINE

Veterans speak naturally using low-latency streaming speech or text. Real-time audio waveform indicates active listening and synthesis.

2. MULTI-AGENT AUDIT TRAIL

The Supervisor Agent coordinates 18 specialist agents. Veterans see transparent step-by-step routing badges (Supervisor → Benefits Agent).

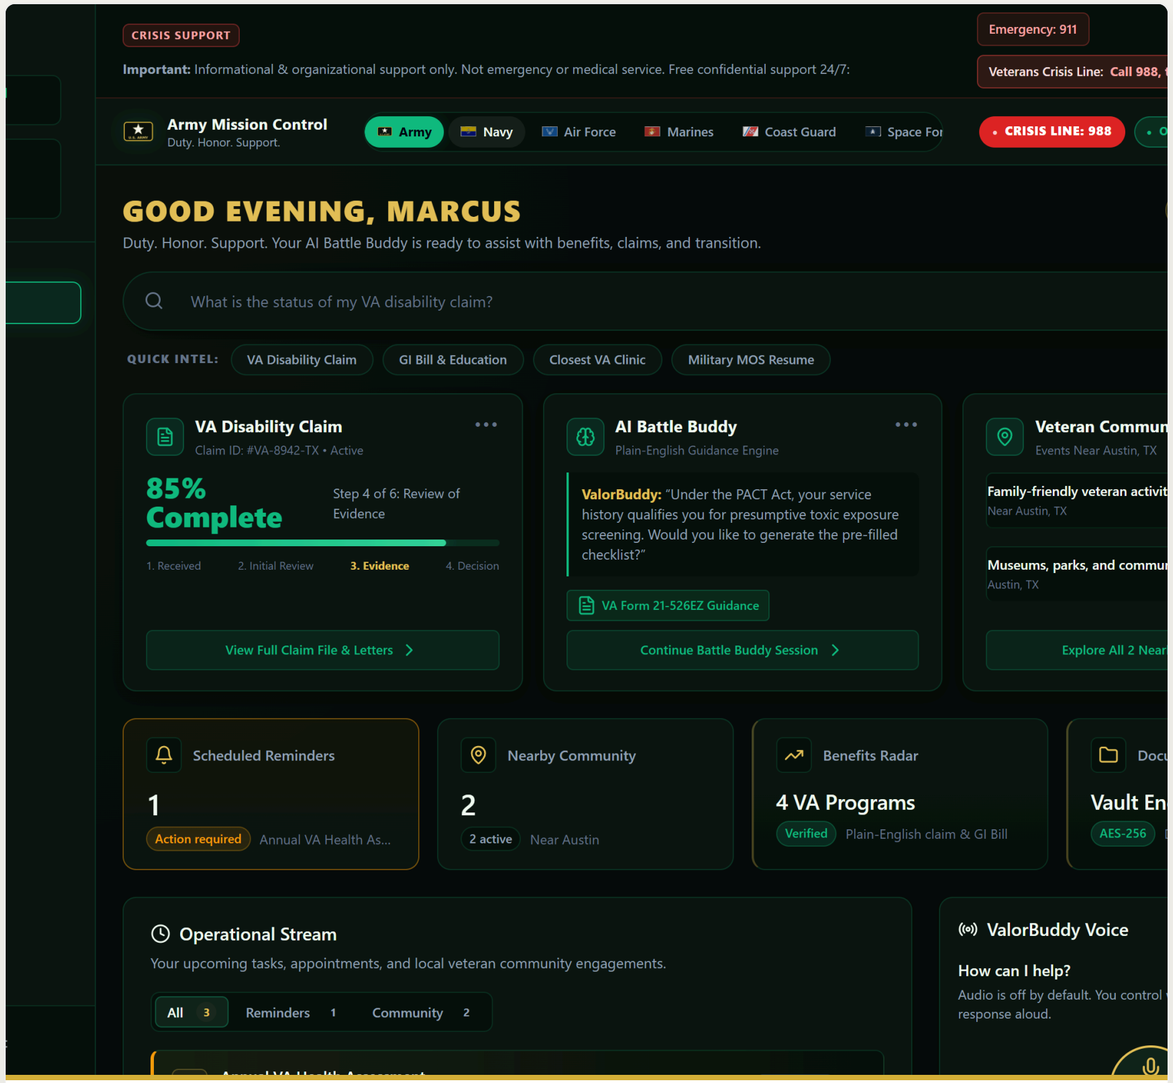

3. STATUTORY CITATIONS

Every answer is cited directly to official Title 38 U.S. Code and verified VA Forms (e.g., VA Form 21-526EZ, 10-10EZ).

4. CRISIS SUPPORT STRIP

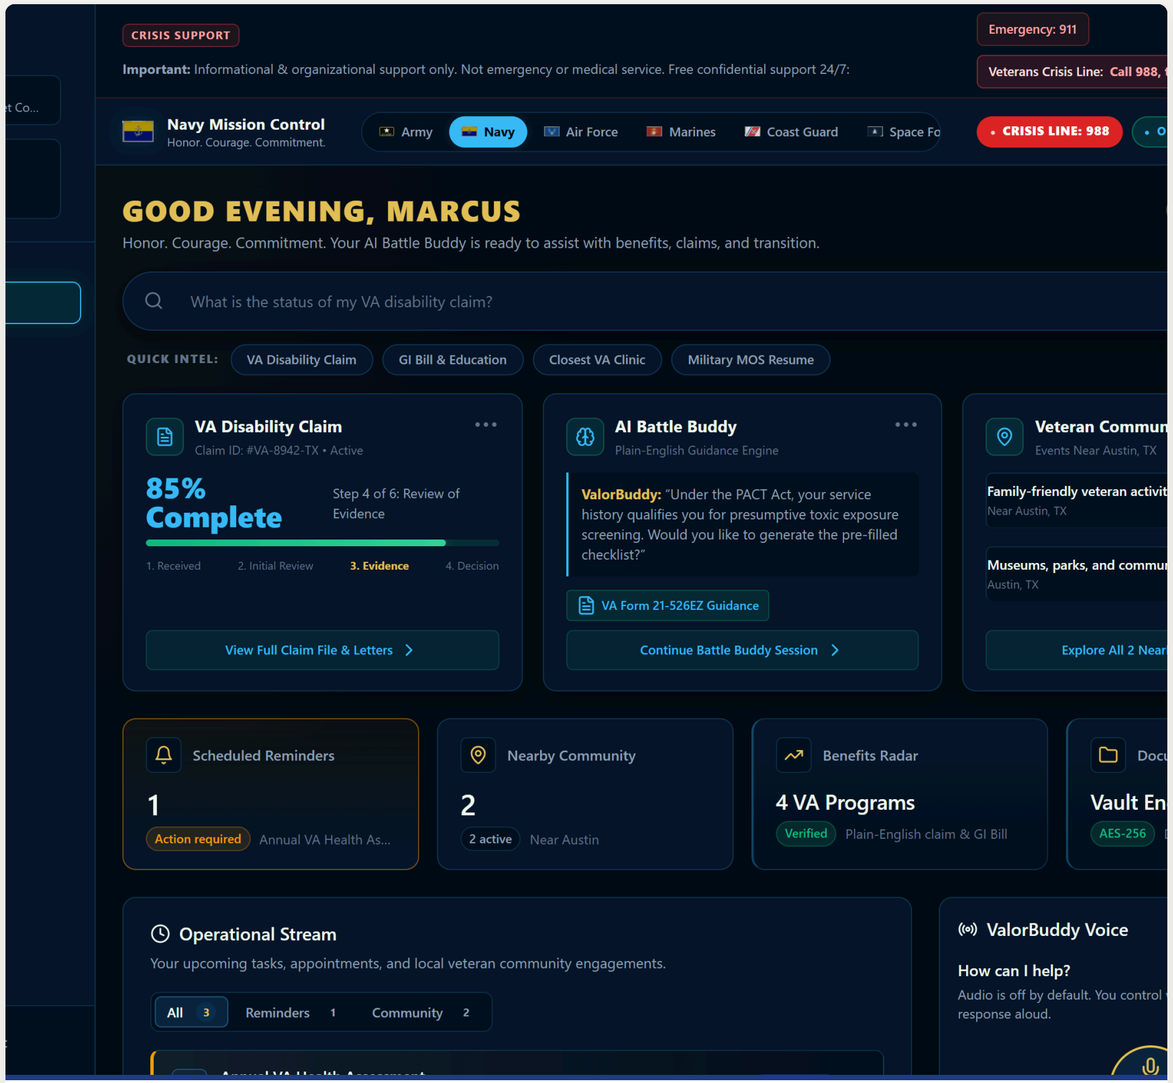

Permanent, persistent header with one-click direct dialing to the **Veterans Crisis Line (988, Press 1)** and 911.

Dedicated command environments: U.S. Army & U.S. Navy

U.S. Army Mission Control
"Duty. Honor. Support."

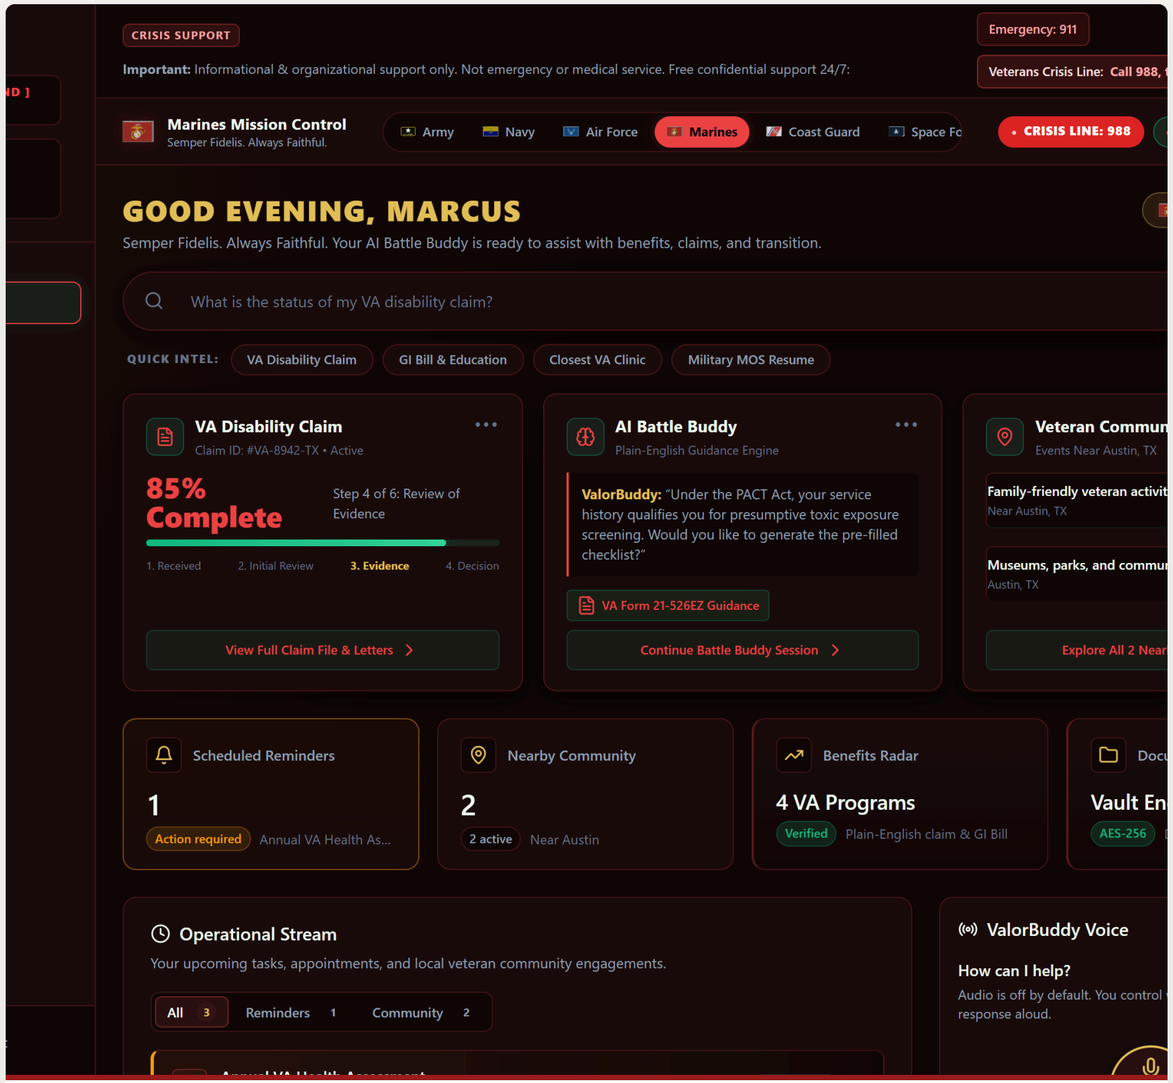

GOLD & OLIVE THEME

U.S. Navy Mission Control
"Honor. Courage. Commitment."

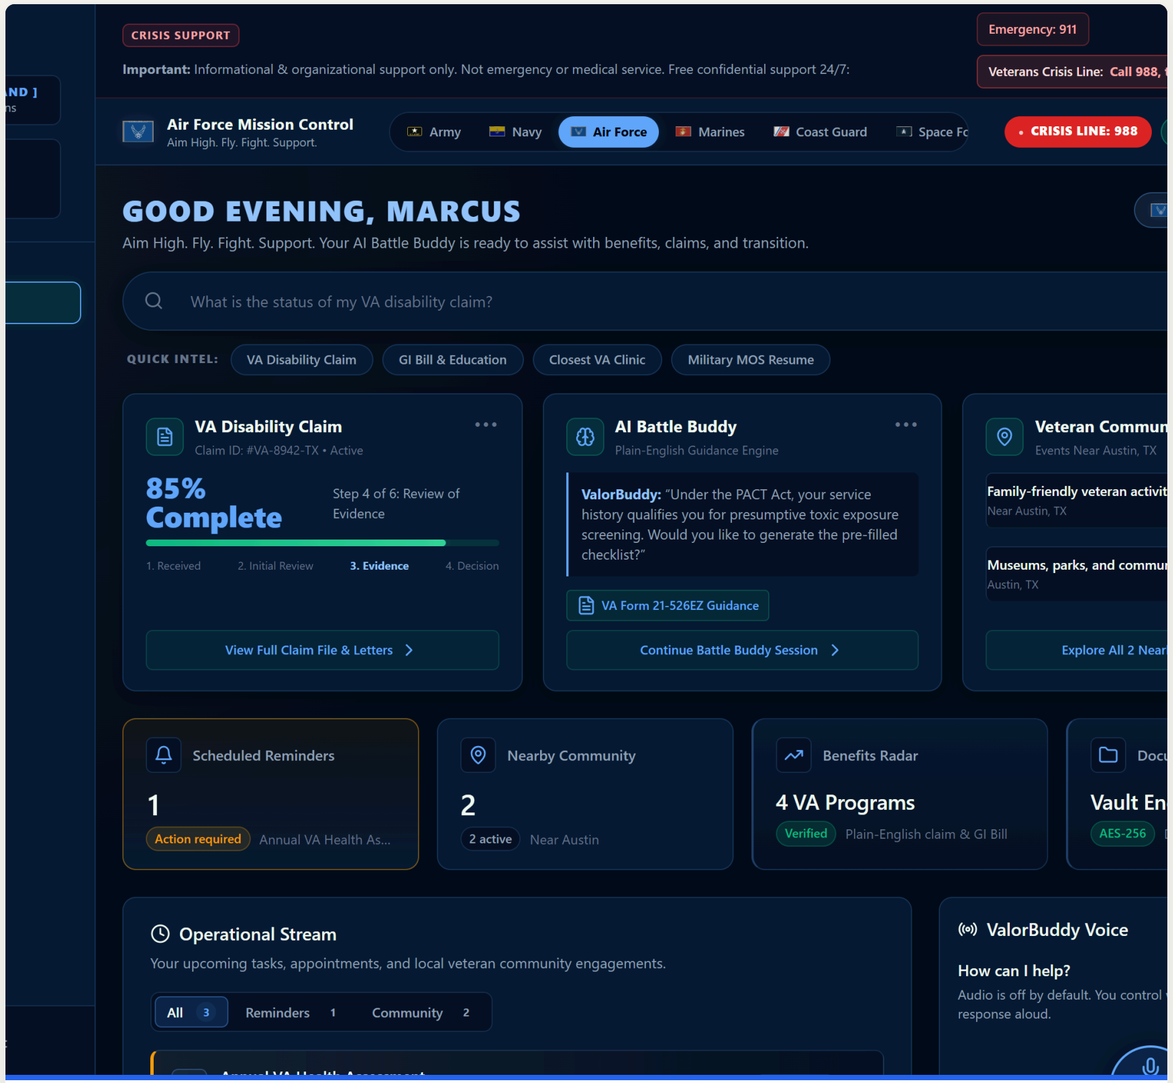

NAVY BLUE THEME

Dedicated command environments: Marine Corps & Air Force

Marine Command Post
"Semper Fidelis. Always Faithful."

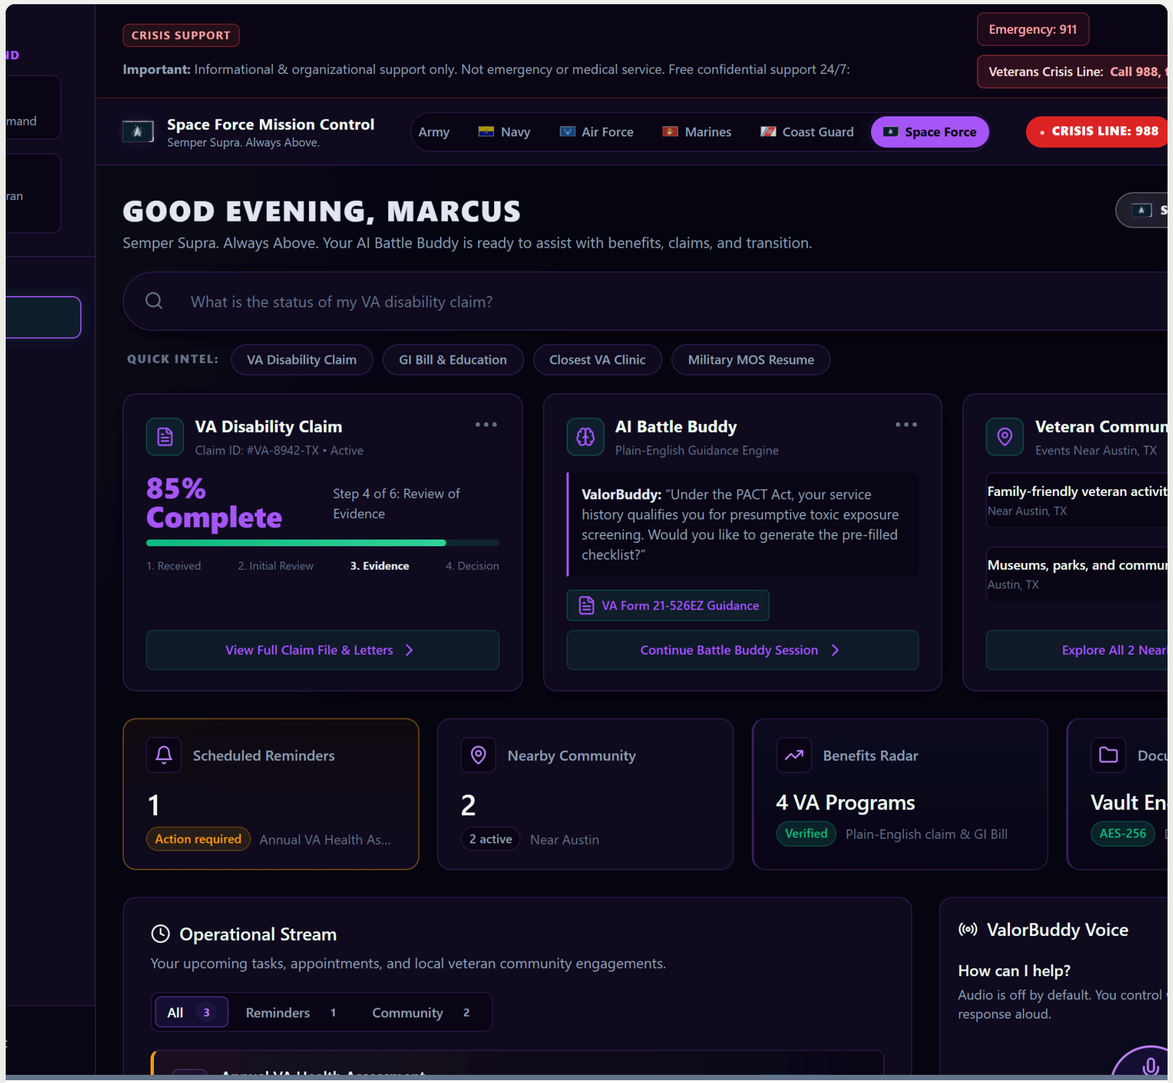

SCARLET & GOLD THEME

Air Force Flight Operations
"Aim High. Fly. Fight. Support."

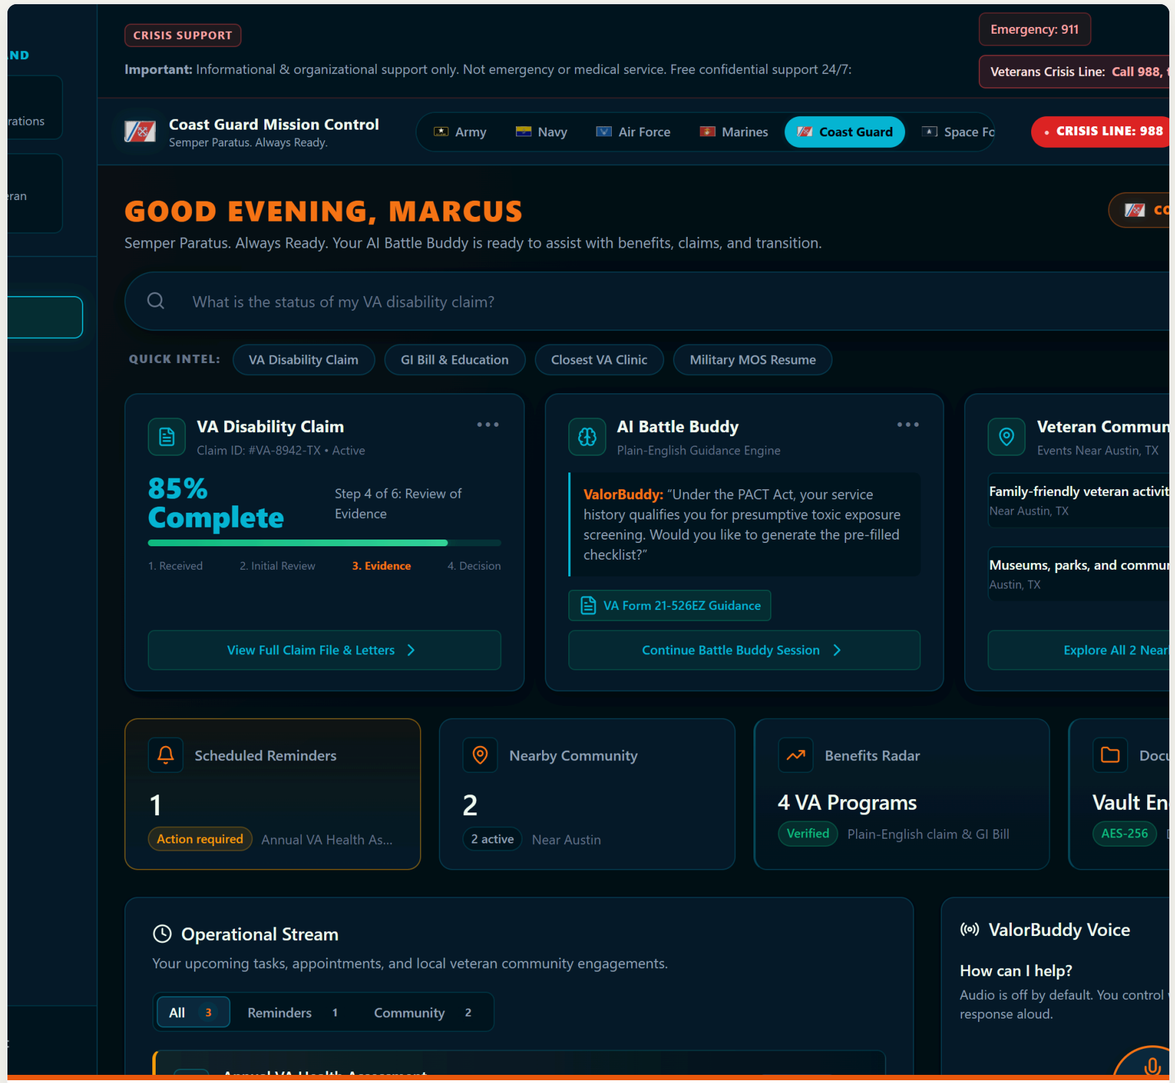

ULTRAMARINE THEME

Dedicated command environments: Space Force & Coast Guard

Space Force Orbital Command
"Semper Supra. Always Above."

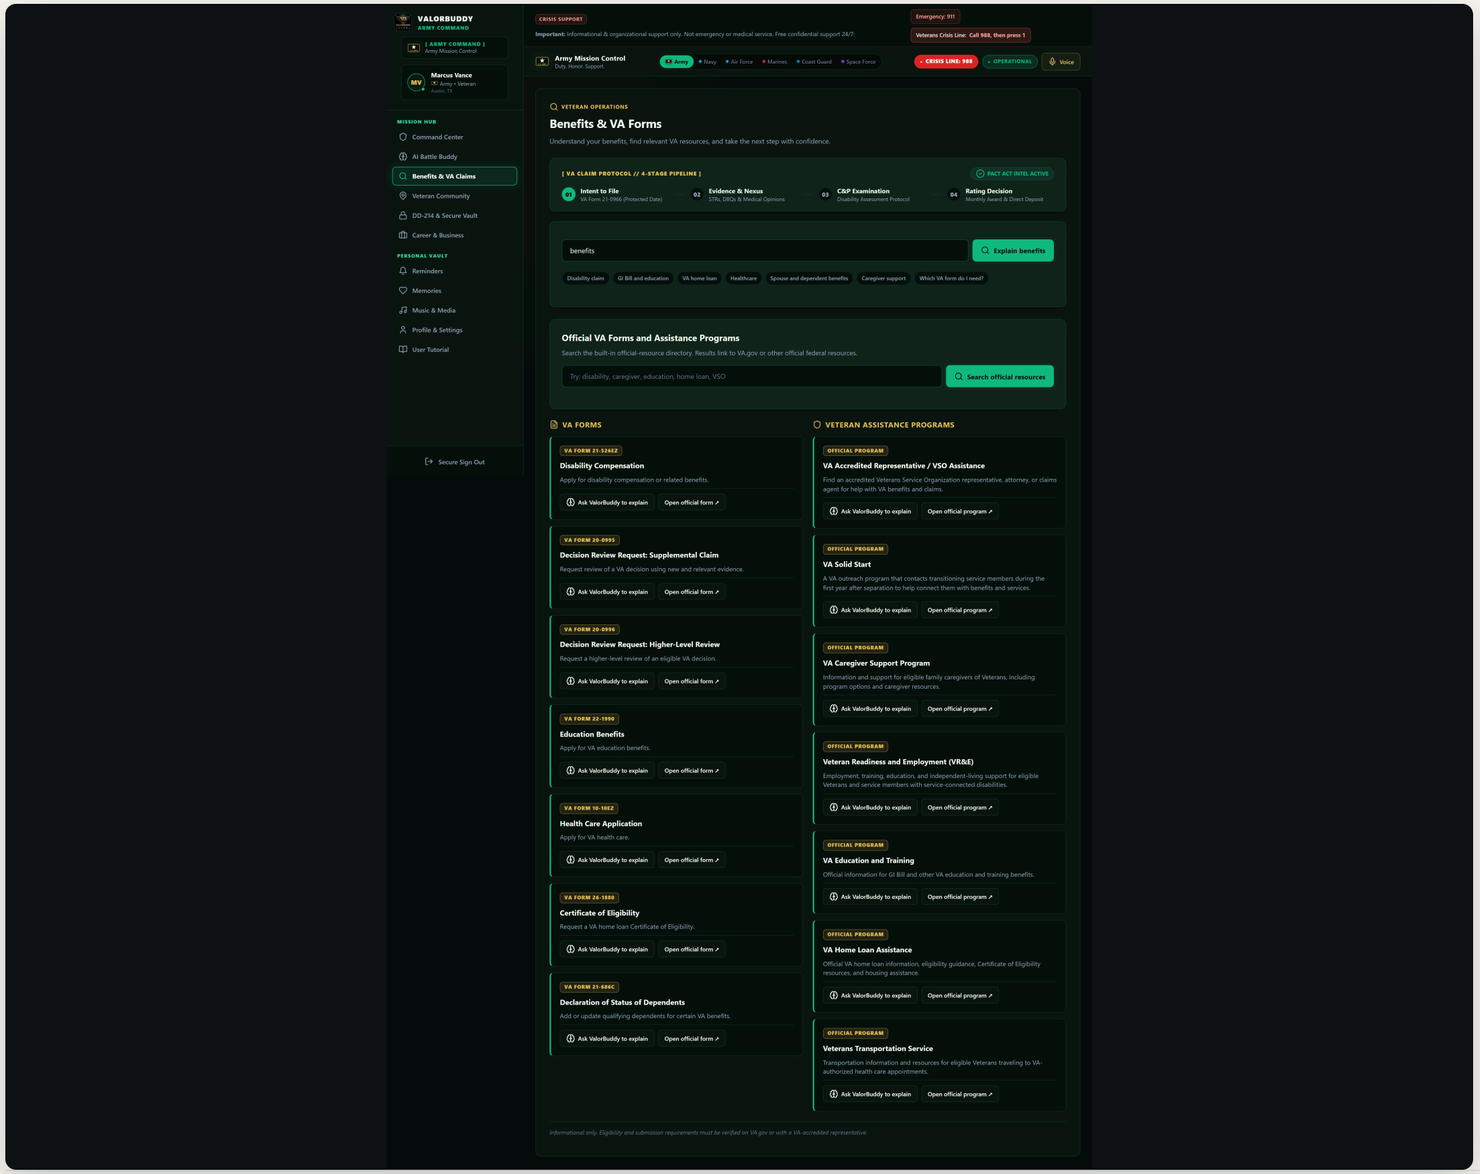

PLATINUM & ORBIT THEME

Coast Guard Rescue Operations
"Semper Paratus. Always Ready."

RESCUE ORANGE THEME

Benefits & VA Claims: Plain-language statutory guidance

DISABILITY & HEALTHCARE GUIDANCE

Breaks down complex 38 CFR ratings, service connection standards, and healthcare priority groups into plain English.

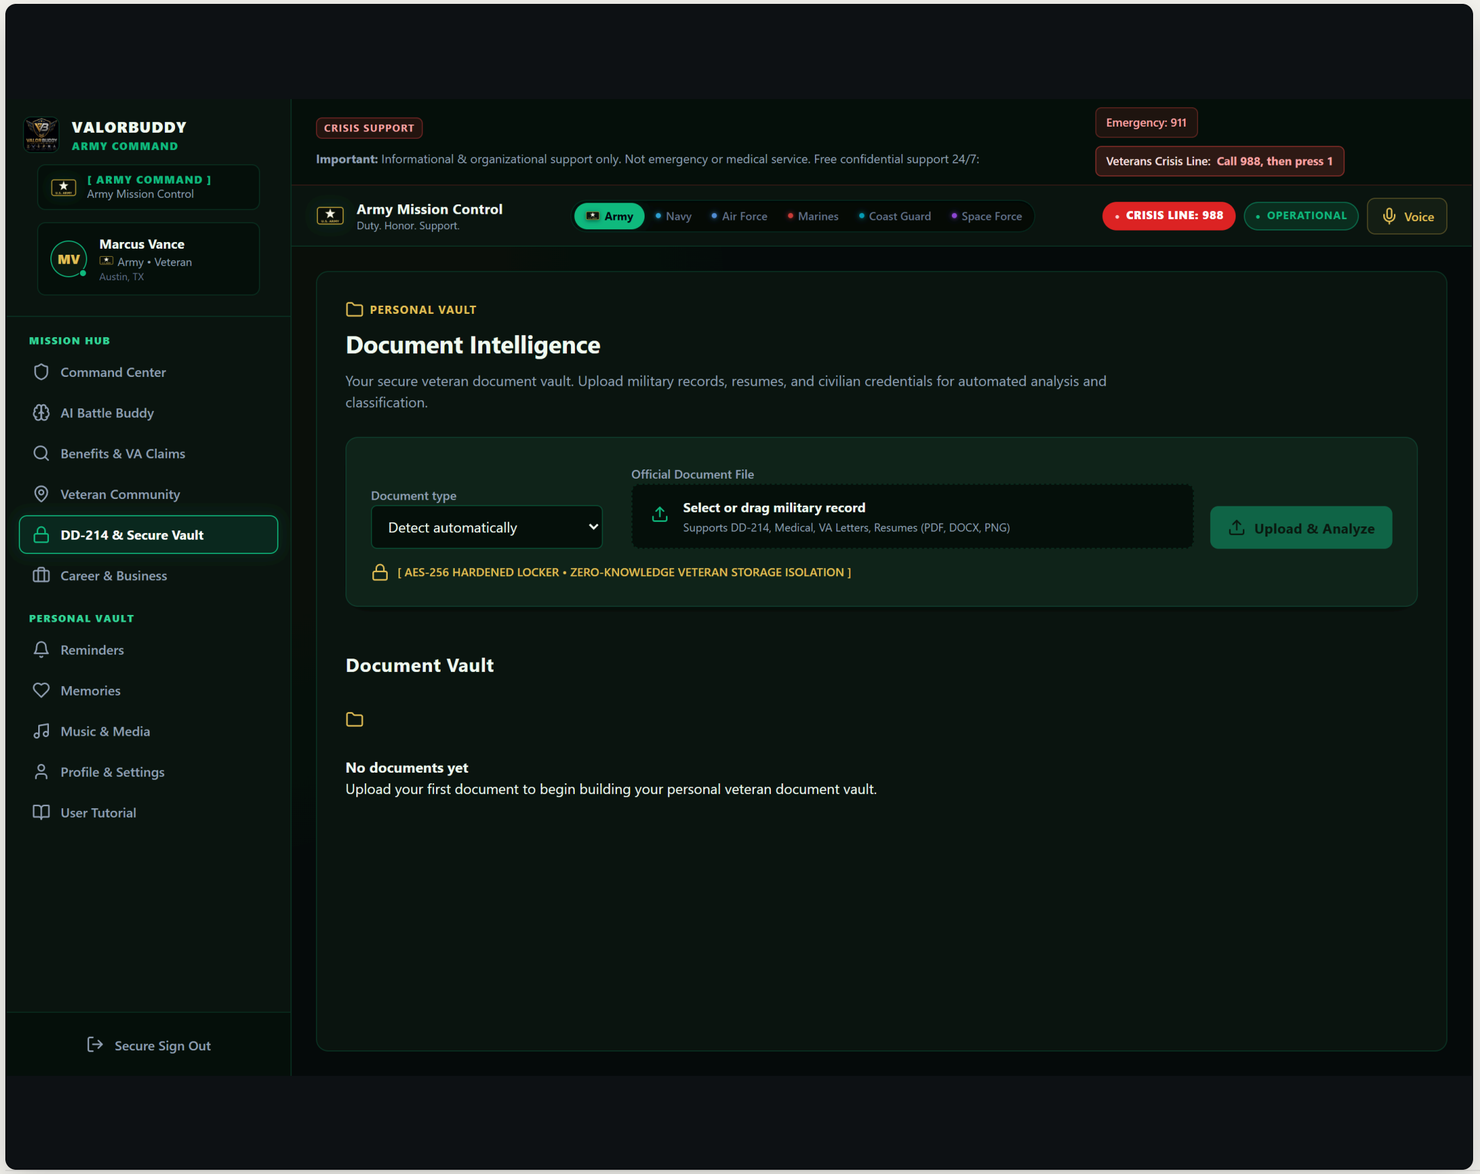

FORM 21-526EZ & 10-10EZ ROUTING

Directs Veterans to official VA application links, checklists, and accredited VSO representatives with zero third-party fees.

GI BILL & EDUCATION CALCULATORS

Calculates Post-9/11 GI Bill eligibility tiers, housing stipends (BAH/MHA), and STEM extensions based on verified service records.

DD-214 & Secure Vault: Document intelligence at rest

AUTOMATED RECORD EXTRACTION

Securely ingests DD-214 PDFs to automatically extract branch, rank, MOS/AFSC codes, decorations, and discharge character of service.

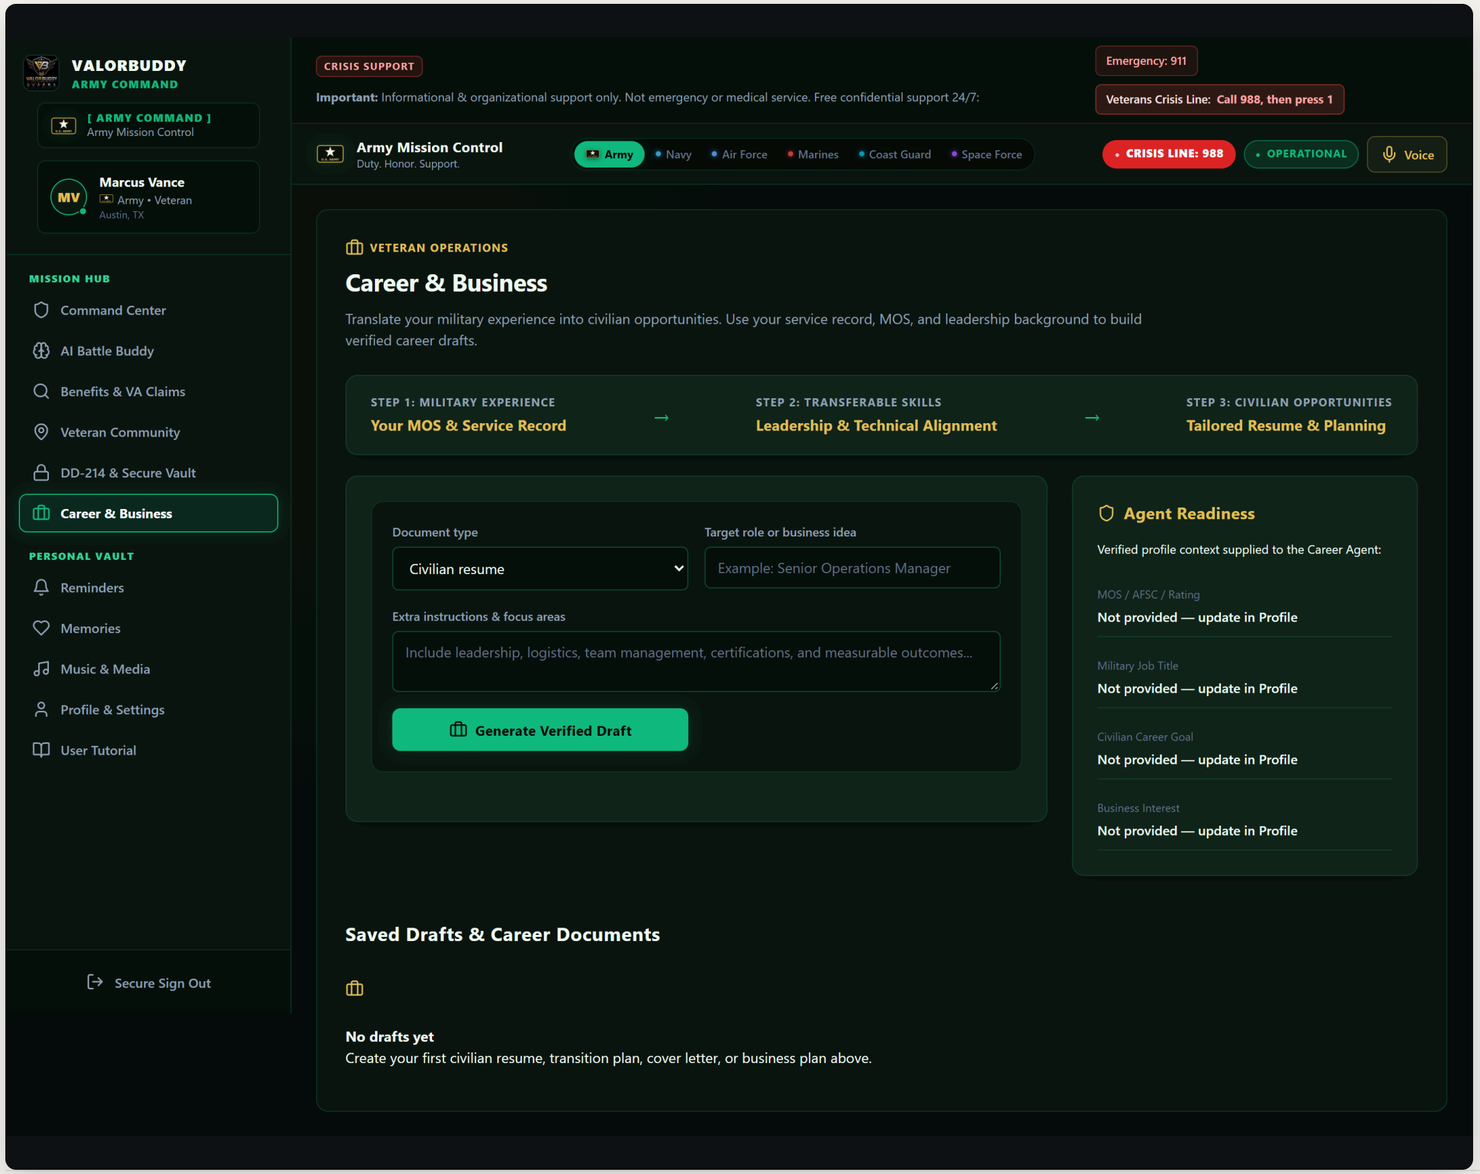

FIELD-LEVEL ENCRYPTION

Sensitive identifiers (SSN, military ratings, service dates) are encrypted in the database at the individual field level using AES-256.

INSTANT CROSSWALK TO BENEFITS

Extracted service data instantly unlocks personalized benefit suggestions without requiring the Veteran to re-type their history.

Career & Business: Military-to-civilian skills translation

MOS / RATING CROSSWALK

Translates military operational roles and combat leadership into high-demand civilian job competencies and corporate equivalents.

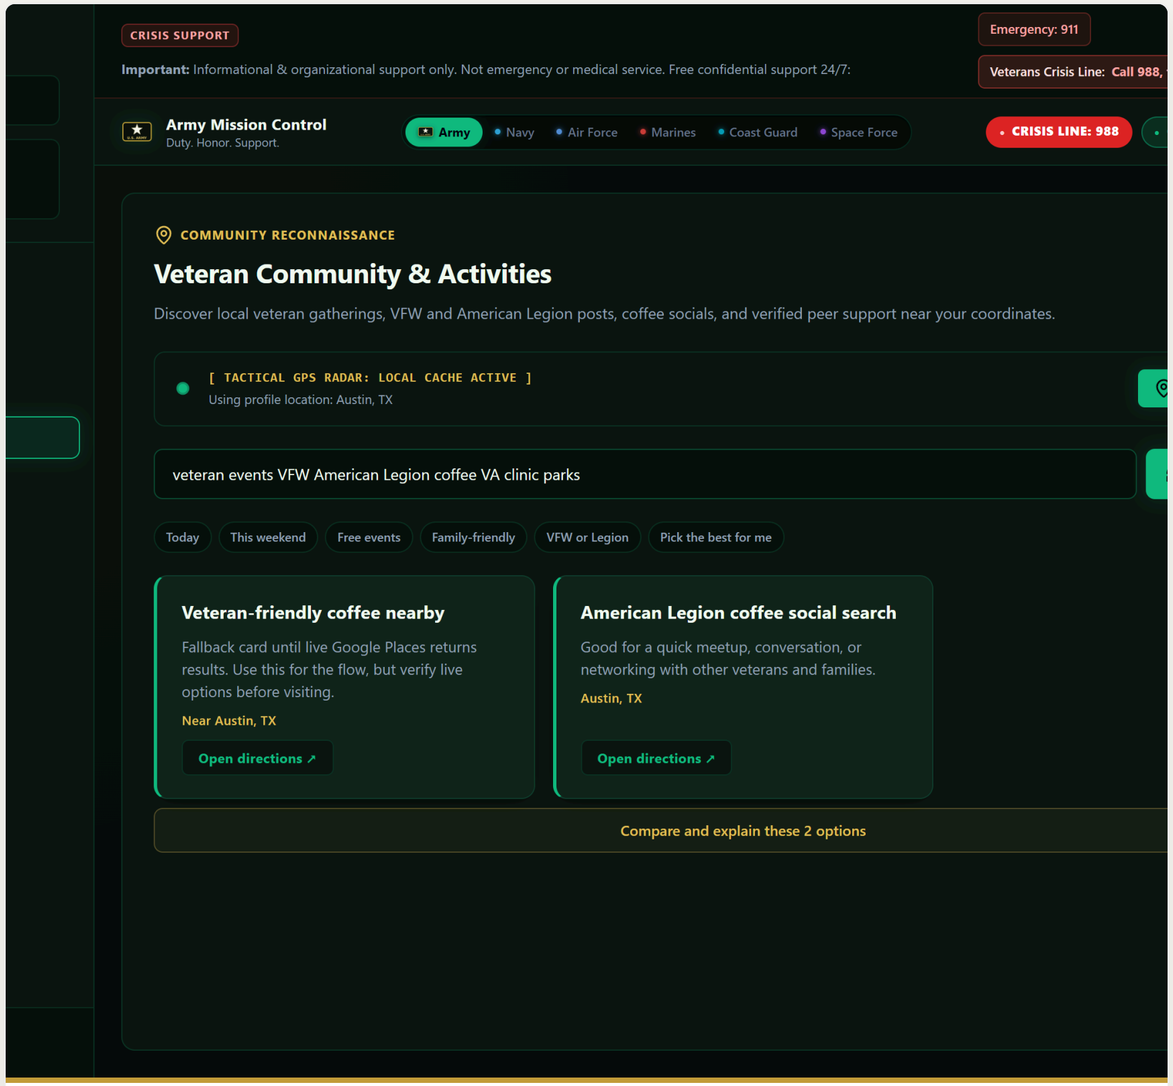

RESUME & FEDERAL HIRING (USAJOBS)

Guides Veterans through Veterans' Preference point qualifications and federal resume structuring for VA and DoD civilian vacancies.

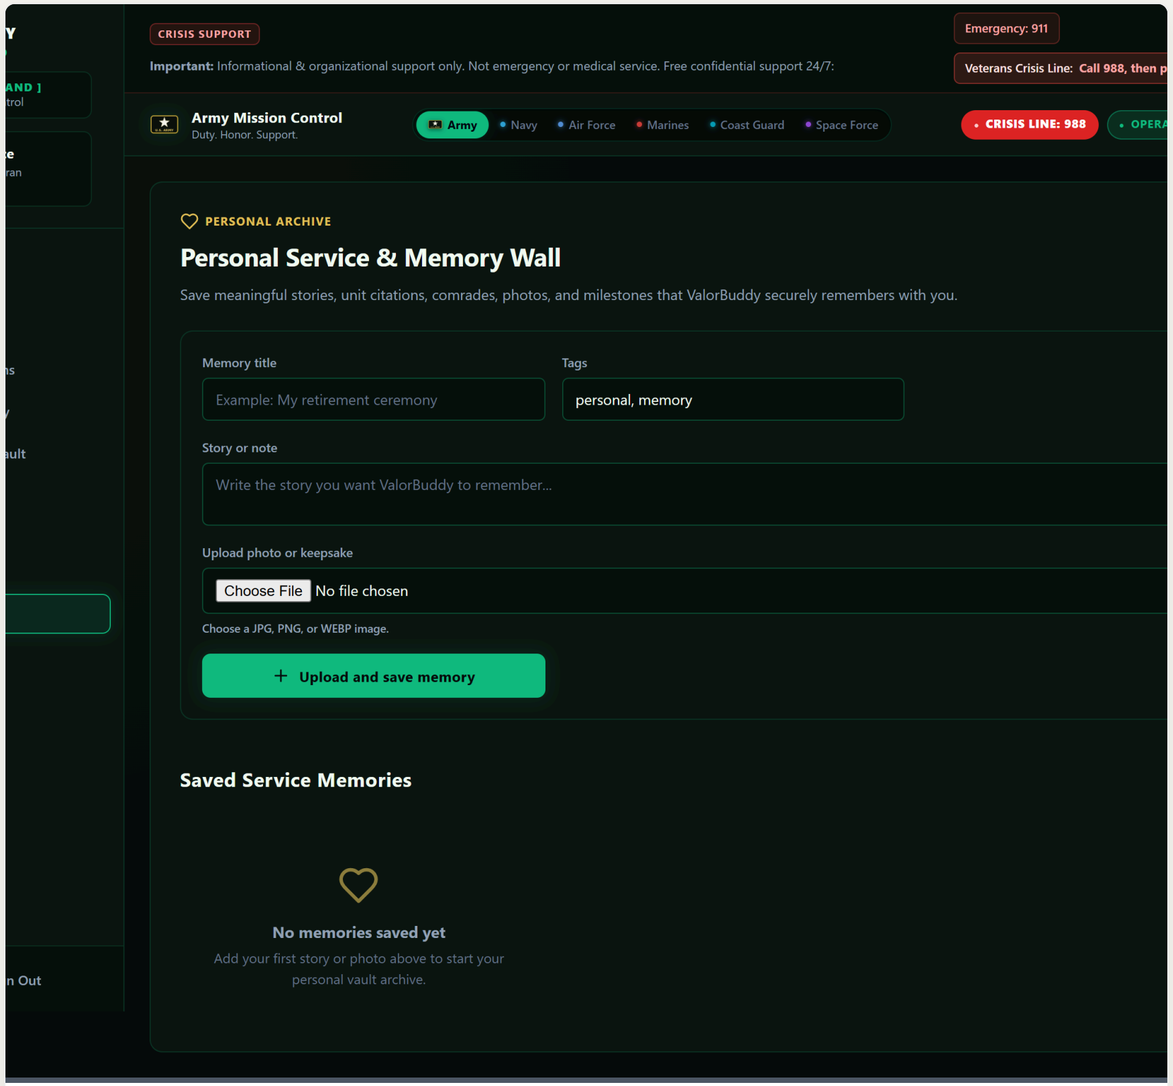

VETERAN ENTREPRENEURSHIP

Provides pathways for SBA VetCert certification, SDVOSB government contracting set-asides, and veteran small business capital.

Community & Memory Wall: Preserving brotherhood & history

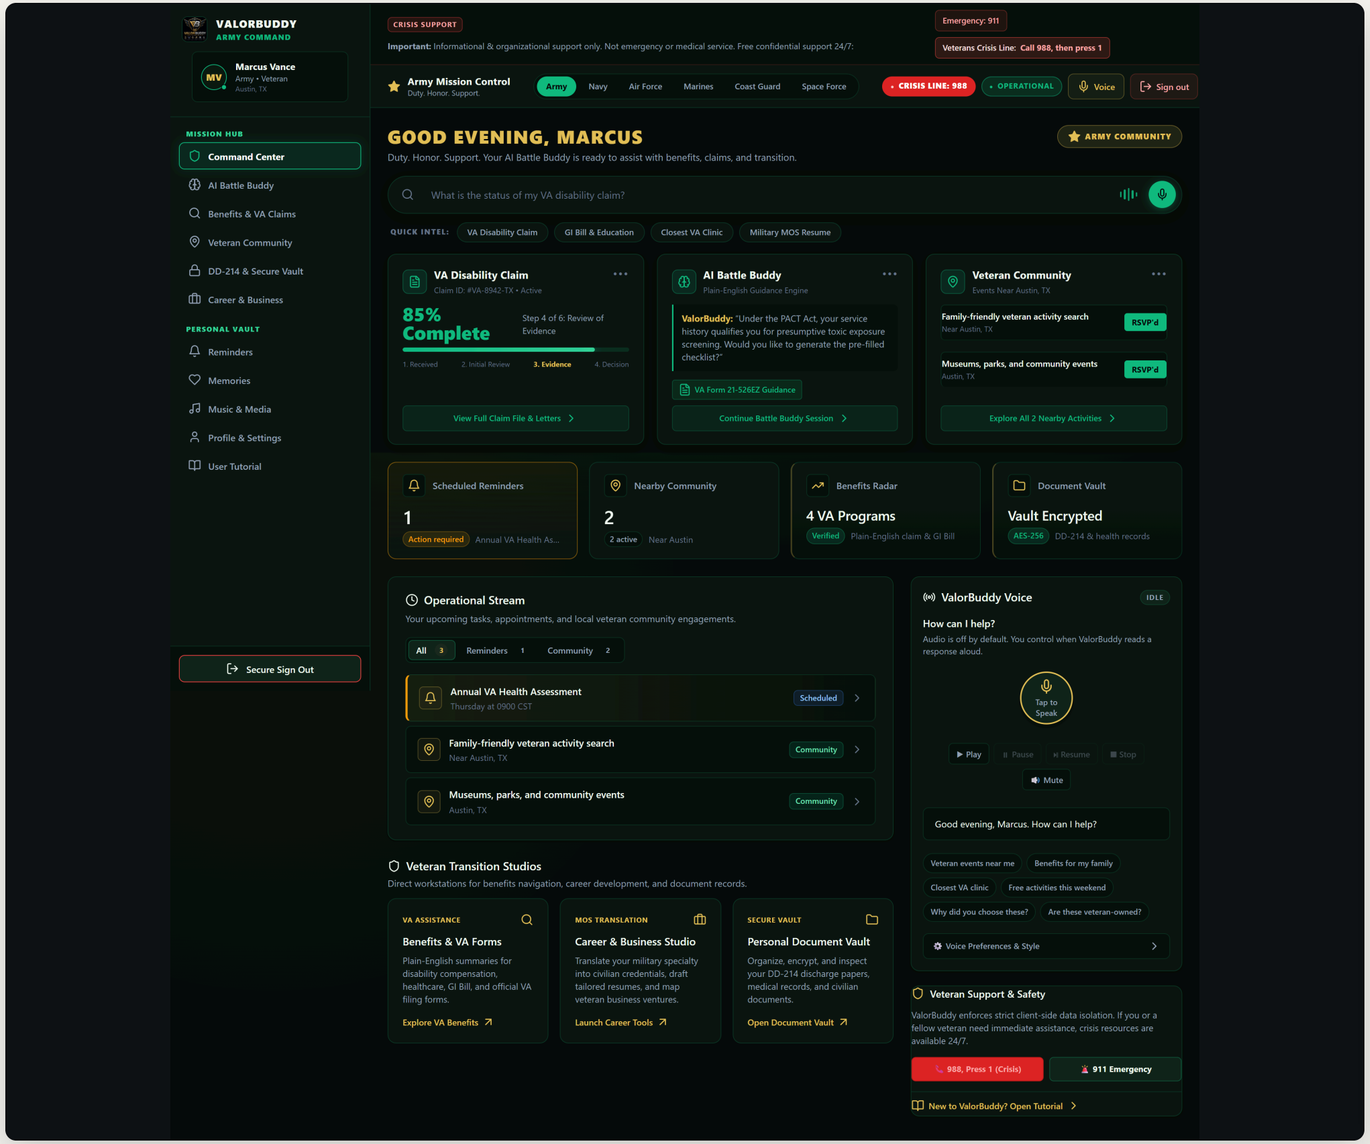

Veteran Community & VSO Posts
Local American Legion, VFW, and DAV post discovery

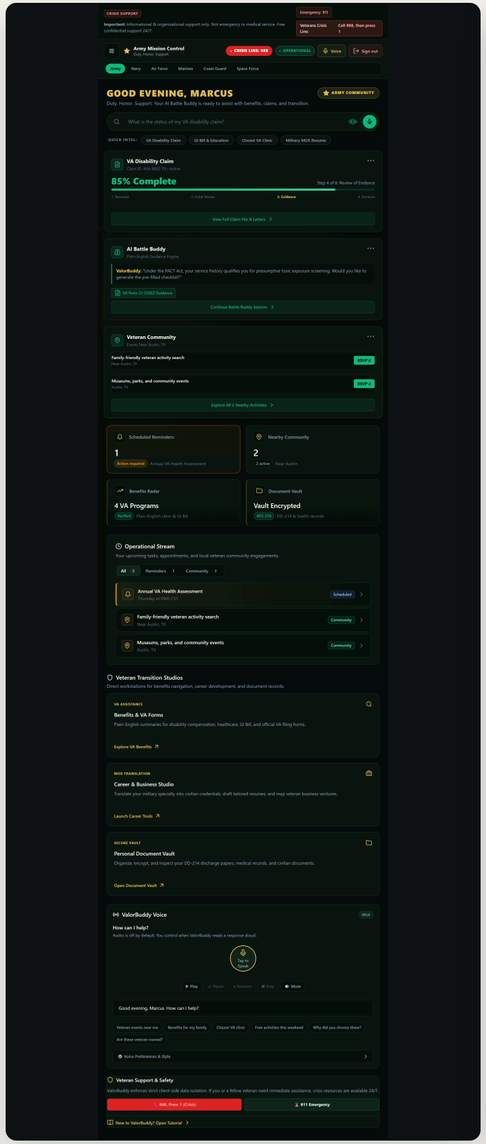

Personal Service & Memory Wall
Private, dignified preservation of units, missions, and comrades

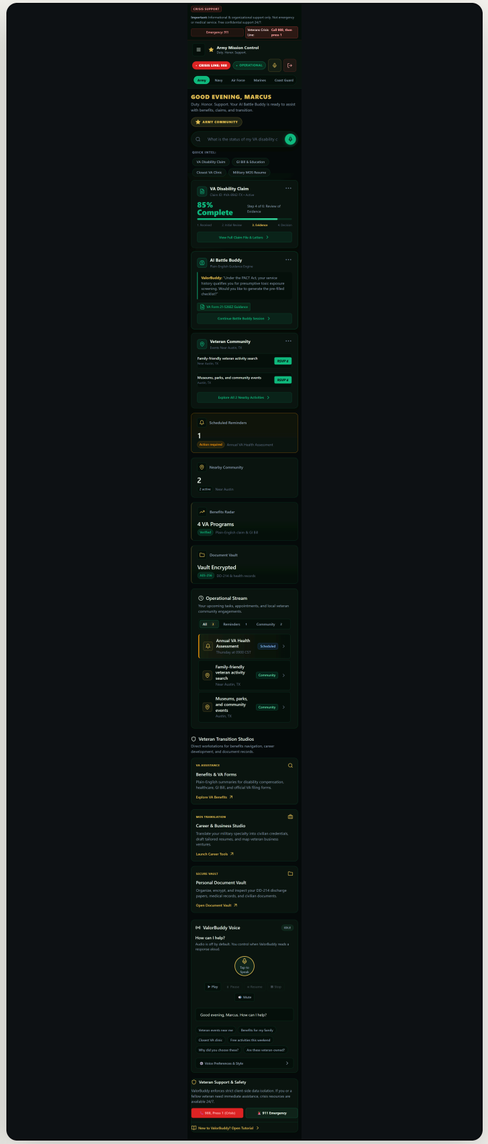

Responsive mission command: Desktop, tablet, and mobile

DESKTOP COMMAND STATION (1440 × 960)

TABLET (768 × 1024)

MOBILE (390 × 844)

RESPONSIBLE AI AND VETERAN SAFETY

Safety and privacy are designed into the core experience

Crisis-aware by design

Emergency and crisis guidance — 911 and Veterans Crisis Line (988, then press 1) — is permanently accessible in the top header of every screen.

Verified before delivery

A shared verification and safety layer checks every agent response against statutory sources before it reaches the Veteran.

Clear about its limits

A persistent notice states ValorBuddy is not a medical device, healthcare provider, or crisis replacement service.

Strict privacy boundaries

Third-party commercial partners never access private conversations, DD-214 documents, or sensitive profile fields.

SECURITY CONTROLS

Controls in production today

CONTROL AREA	IMPLEMENTATION
Data protection	Field-level encryption of VA disability rating, deployment history, and uploaded DD-214 documents
Credential security	Argon2id password hashing with automatic migration from legacy hashes
Privileged access	Mandatory administrator MFA (TOTP) and strict role-based access control (RBAC)
Audit logging	Access-audit logs retained for 365 days; structured security events
Application hardening	Rate limiting; strict CSP, HSTS, and COOP/CORP security headers platform-wide
Hosting infrastructure	Render (SOC 2 Type 2, ISO/IEC 27001 at platform level) hosted on AWS

FEDERAL COMPLIANCE POSTURE

Where we stand today — stated plainly

REQUIREMENT	STATUS	NEXT STEP
Section 508 / WCAG	IN PROGRESS	Independent audit; Accessibility Conformance Report (ACR)
NIST SP 800-53 / CSF	IN PROGRESS	Complete control mapping with fractional CISO
OMB M-22-18 / M-23-16	READINESS	Secure software development self-attestation
SOC 2	PLANNED	Type I begins Q4 2026; Type II in 2027
Penetration Testing	SCHEDULED	Independent third-party penetration test scheduled Q4 2026
FedRAMP / VA ATO	PLANNED PATH	Evaluate FedRAMP-authorized hosting; follow VA authorization guidance

FEDERAL READINESS ROADMAP

Milestones over the next 18–24 months

Q4 2026

- VA market research engagement
- Independent penetration test
- SOC 2 Type I engagement begins
- Update VA vendor record with UEI and CAGE

Q1–Q2 2027

- Fractional CISO onboarded
- SBA VetCert VOSB/SDVOSB certification
- Referral and VSO-channel launch

Q3–Q4 2027

- SOC 2 Type II examination
- Section 508 accessibility audit
- Native mobile app launch (Google Play & App Store)

2028

- Pursue the authorization path VA requirements call for
- Expand institutional VA partnerships

POTENTIAL ALIGNMENT WITH VA

Where ValorBuddy could complement VA channels

Transition support	Plain-language, always-available guidance that reinforces what service members learn in transition programs.
Benefits navigation	Helps Veterans understand options and reach the right VA channel or accredited VSO representative.
Facility & resource discovery	Location-grounded discovery using VA Lighthouse Facilities API data for nearby VA clinics and hospitals.
Document intelligence	Turns a DD-214 or military resume into clear next steps, with sensitive fields encrypted at rest.

Exploratory: *An orchestration layer that makes trusted VA services easier to navigate — not a replacement for them.*

QUESTIONS FOR VA

What we would value learning from you

1. Which VA offices or programs have current or anticipated needs for Veteran-facing digital assistance or AI?
2. What security authorization path does VA expect for vendor-hosted, Veteran-facing SaaS — VA ATO, FedRAMP, or both?
3. What Section 508 testing and Accessibility Conformance Report documentation does VA require at evaluation?
4. What AI governance, transparency, and data-handling requirements apply to Veteran PII?
5. Which acquisition pathways suit an early-stage Veteran-owned firm — Veterans First set-asides, subcontracting, or pilots?
6. Which other VA teams would you recommend for further market research conversations?

TEAM

Leadership

SSG Godson Onyeije

Co-Founder and President, Federal Programs

U.S. Army (Ret.), Wounded Warrior. Retired Staff Sergeant with 10+ years of service, including support to Special Operations Command Africa. Leads federal-market strategy and the VA engagement.

Eugene Ezenwa Ebem

Co-Founder and Chief Technology Officer

AI, data, and cloud architect with 10+ years delivering enterprise platforms in financial services, telecom, healthcare, and retail. Leads product, engineering, and security architecture.

TEAM

Advisors

Dr. Tony Oguamanam

Advisor — Finance & Enterprise Performance

DBA, MBA, CTP. 20+ years in finance and enterprise performance management. Principal Director at global firm; former CFO, Harris County Universal Services; former Senior Manager, Deloitte.

José Fernando Raymundo

Advisor — Military Medicine & Veteran Health

Sergeant Major, U.S. Army (Ret.). Senior enlisted leader of major military medical missions. Advises ValorBuddy on Veteran health needs, care coordination, and service member experience.

Chidinma Menakaya

Advisor — Partnerships & Grants

15+ years building high-value strategic partnerships at LivingSocial/Groupon, Gartner, and NASCAR, plus senior FDA account leadership.

Thank you

We welcome VA's questions and guidance.
